Real-time Security for Real-time Communications

Unified Communications (UC) is taking off in enterprises around the globe as networks converge on IP infrastructures (supporting voice, video, data, IM, presence, collaboration applications) and Session Initiation Protocol (SIP) emerges as the protocol of choice for UC. The potential benefits of UC are numerous – from highly efficient, extended communications, elimination of network redundancies, improved disaster recovery, and smaller carbon footprints, to improved customer relationships and leaner supply chains.

The advantages of UC come a host of security concerns as enterprises extend their communications infrastructures beyond traditional perimeters to untrusted networks like the Internet.

Security is essential for any successful UC deployment.

Sipera’s offerings fall into two categories:

<p>UC Security Monitoring Services Sipera provides 24x7 monitoring and alerting of UC security incidents for customers who have deployed a UC-Sec appliance.</p> <p>The levels of monitoring vary, according to the needs of the enterprise:</p>	<p>UC Security Management Services Sipera provides a full turnkey solution for comprehensive management of UC application security, including installation, upgrades, maintenance, monitoring, threat response, configuration change management, optimization, and many other services. An additional option is for customers to lease UC-Sec units to reduce capital expenditure.</p>
<p>SVC-MNTR-200-500 Supports Systems with 200-500 users.</p>	<p>SVC-MGD-200-500 Supports Systems with 200-500 users.</p>
<p>SVC-MNTR-1000-3000 Supports Systems with 1000, 2000 or 3000 users.</p>	<p>SVC-MGD-1000-3000 Supports Systems with 1000, 2000 or 3000 users.</p>
<p>SVC-MNTR-5000-10000 Supports Systems with up to 5000 or up to 10000 users.</p>	<p>SVC-MGD-5000-10000 Supports Systems with up to 5000 or up to 10000 users.</p> <p>Scalability allows even small to medium-sized enterprises to benefit from real-time, comprehensive security, protecting mission-critical VoIP and UC communications infrastructures.</p>

Some of the world’s largest and most successful companies rely on Sipera Systems solutions for real-time, comprehensive security protecting their mission critical VoIP and UC communication infrastructures.

Sipera’s Managed Services solutions offer companies of all sizes the benefits of an in-house, 24-7-365 monitored appliance without the added expense of additional personnel, or a lump-sum capital expense.

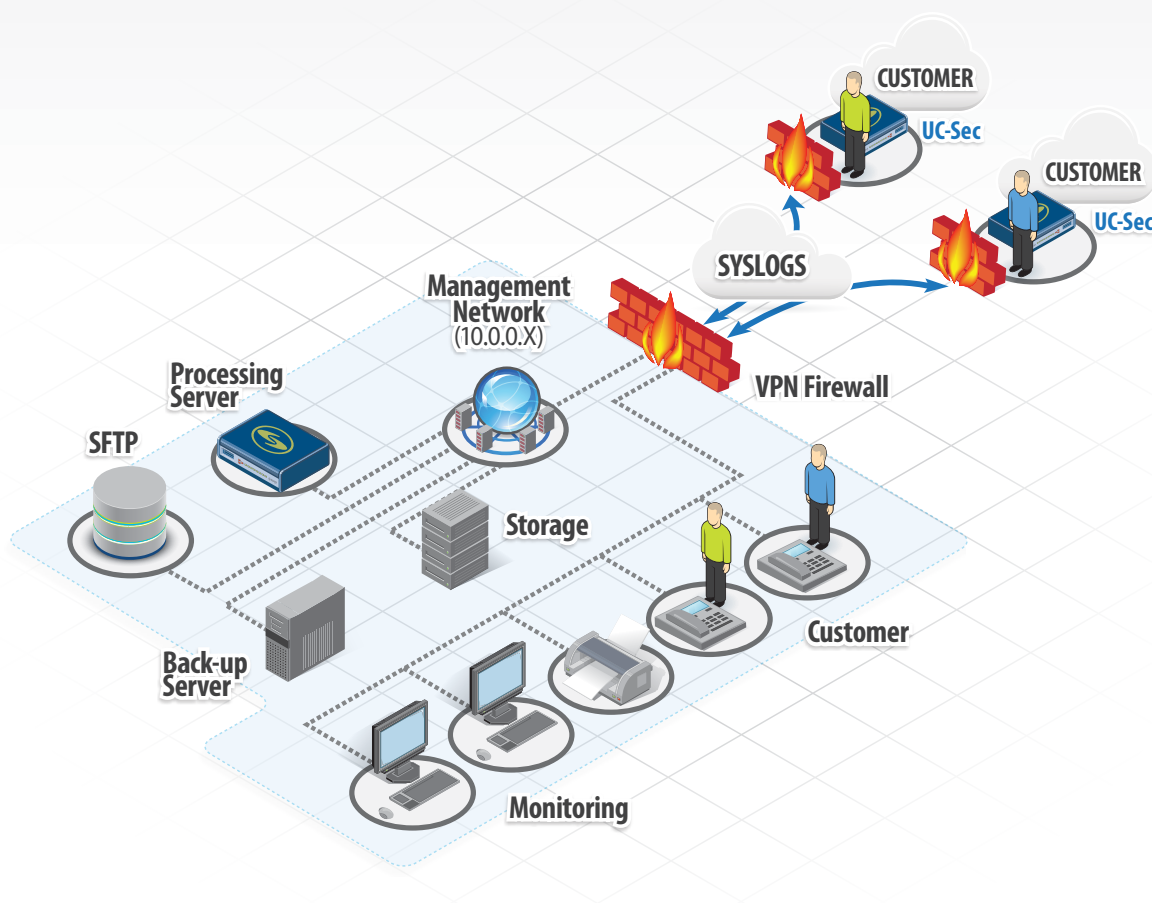

In addition, our Managed Services offerings are flexible, enabling a spectrum of security configurations that support your business objectives.

As part of the configuration, the Sipera NOC (Network Operations Center) collects all data from the Sipera EMS on a regularly scheduled basis. Once data is collected, the Sipera NOC generates periodic, customized reports. These reports include customizable information, allowing you to keep track of your network’s health, traffic, security violations and other monitoring factors.

Sipera’s NOC offers real-time notification of specific security issues in your network. These security events are typically time-sensitive and require immediate attention once a threat is detected.

As an added security enhancement, all connections from the Sipera NOC to the customer’s Sipera EMS network are secure. The same security applies to all notifications sent to enterprise personnel.

The Sipera NOC also offers archive and storage of all generated customer reports. The Sipera archive entity is redundant and comes with a full-backup system to avoid any loss of data.

UC Security in a Box

Sipera's UC-Sec appliance provides a complete application-layer security architecture in one device:

- Firewall
- Session Border Controller
- Intrusion Detection System and Intrusion Prevention System (IDS/IPS)
- Access Controller
- Authentication
- Unified Communications Proxy
- VPN / Encryption
- Policy Enforcement

... for all real-time Unified Communication applications

UNIFIED COMMUNICATIONS UNLEASHED

About Sipera Systems

Sipera Systems, the leader in real-time Unified Communications (UC) security solutions, is the choice of enterprises and service providers around the world to support their mission-critical UC deployments.

Sipera offers groundbreaking solutions that secure voice, video, messaging, collaboration, and other real-time communications in converged IP networks, boosting compliance with information security requirements and simplifying the adoption of UC. Sipera's innovative *Borderless UC™* architecture delivers secure and private enterprise-class communications to any device over any network in any location.

Backed by the industry-leading research of the VIPER Lab, Sipera's award-winning UC-Sec appliance provides comprehensive threat protection, policy enforcement, access control, and encryption in a single, flexible, plug-and-play device. The UC-Sec is pre-integrated with all market-leading UC vendor solutions and is the world's first UC security device to be Common Criteria certified, meeting the stringent international standard for IT security.
